***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1, 3-14, 22-28, 30-35, 39, 41-50, 58 and 59 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beier et al (6,071,419).

Beier et al disclose a filter matrix comprising at least one filter screen layer (12) having apertures in diamond shape (14), and a stack of at least filter layers whereby when the fluid stream is passing through the filter matrix, the pathway of the fluid stream is labyrinthine (see arrows of fluid stream in Fig. 5). Claims 1, 3-14, 22-28, 30-35, 39, 41-50, 58 and 59 differ from the disclosure of Beier et al in that the filter material is made of expanded metal. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the filter matrix of Beier et al being

expanded metal or any other suitable material since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416.

Claims 2, 15-21, 29, 36-38, 40 and 51-57 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beier et al (6,071,419).

Beier et al disclose a filter matrix comprising at least one filter screen layer (12) having apertures in diamond shape (14), and a stack of at least filter layers whereby when the fluid stream is passing through the filter matrix, the pathway of the fluid stream is labyrinthine (see arrows of fluid stream in Fig. 5). As to the numerical requirements of claims 2, 15-21, 29, 36-38, 40 and 51-57, the specification contains no disclosure of either the critical nature of these requirements or any unexpected results arising therefrom, and as such these requirements would be arbitrary and therefore obvious.

Applicants **must** show that these requirements are critical. *In re Woodruff*, 16 USPQ 2d 1934.
